ANTHRACITE

Kerbon gives your garden or terrace just the personal touch you want for your privacy screen. An innovative material developed as a composite of ceramic and Solid Layer.

PRIVACY IN ITS  
MOST BEAUTIFUL  
FORM.

ELEGANT  
AND  
DURABLE.

It never loses its shape or color and is weatherproof throughout. Its impressive longevity makes it particularly sustainable to other systems. Moreover, it does not require any additional maintenance such as painting or chemical cleaning, as this ceramic is resistant to organic and mechanical effects. Kerbon - irresistible in appearance, everlasting in material, convenient in handling. SOLID SYSTEM, NEAT SOLUTION.

Kerbon, an entirely new material that offers horticulture more options for design concepts. It is probably the most elegant and enduring way to create more privacy. At the same time, the ceramic surface scores particularly well in terms of sustainability. Once installed, the privacy screen system lends a pleasantly homely ambiance - and it is not only timelessly beautiful, but also consistent in style and function. A FUSION OF AESTHETICS AND FUNCTION.

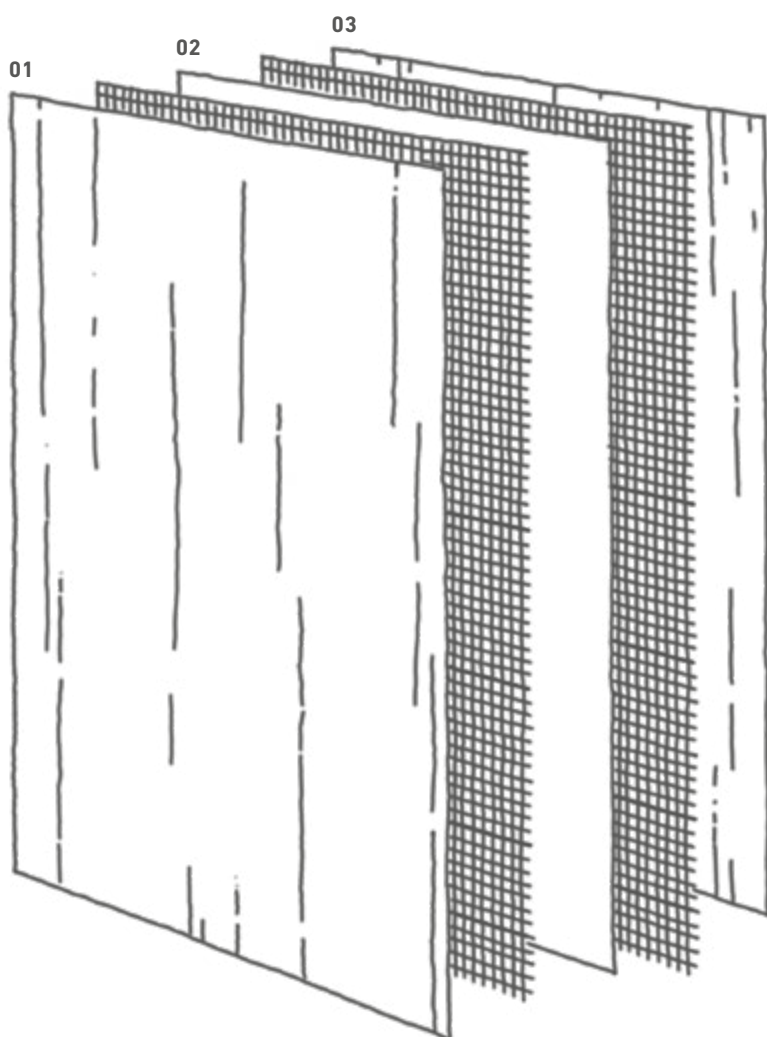

Precisely matched ceramic layers give the surfaces a modern aesthetic. The specially developed Solid Layer that connects the two elements ensures application safety under extreme wind loads, hydrothermal influences and pendulum impact tests. Kerbon is composite safety ceramic that effortlessly withstands even hurricane force 12 and far beyond. Tests have confirmed this new dimension in fracture resistance, durability and flexibility. Ceramics have been a valued material for thousands of years. With Kerbon, ceramic has now been further developed into a completely new, innovative material for new applications with a particularly noble, visual effect. HIGHT-TECH CERAMICS IN HIGHEST PRECISION.

The privacy screen is installed using a proven system solution with surface-finished posts made of weather-resistant aluminium, which forms the appropriate frame for the noble ceramic elements. With the innovative geometry of the brackets, they can be arranged flexibly and at different angles according to the customer's requirements. In combination, this system is completely maintenance free, impressively resistant and maximal durable.

FORMAT of the individual elements:  
60 x 120 cm

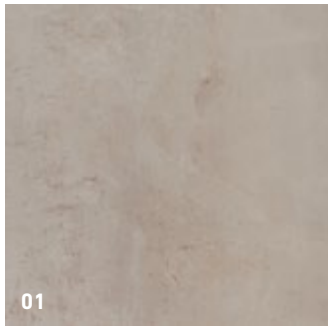

The system posts made of aluminium are weather-resistant due to the surface finish. A permanently maintenance-free highlight. With its innovative geometry on all four sides, the privacy elements can be installed not only around corners, but also at various angles. The modular system fulfills many design wishes. It combines high-grade aesthetics, stability and quality with ease of installation. INDIVIDUAL FENCE PROJECTS, GEOMETRIC, INNOVATIVE.

The ceramic elements can be arranged at a 90° angle.  
For the bevels, max. 15° angles are possible.

With a state-of-the-art ceramic privacy screen, Kerbon introduces a completely new material and thus offers an extraordinarily elegant system for sophisticated garden and terrace design. The Kerbon privacy screen system is available in special ceramic surfaces - from minimalistic beige to art prints. The ceramic element can develop a uniform effect in its color nuances or be used deliberately as a contrast and design element. A STYLISH CHOICE – SELECTED CERAMIC SURFACES.
